

Instructions for using the Wild Horse Census Program.

## **Using the Palm OS PDA**

**For**

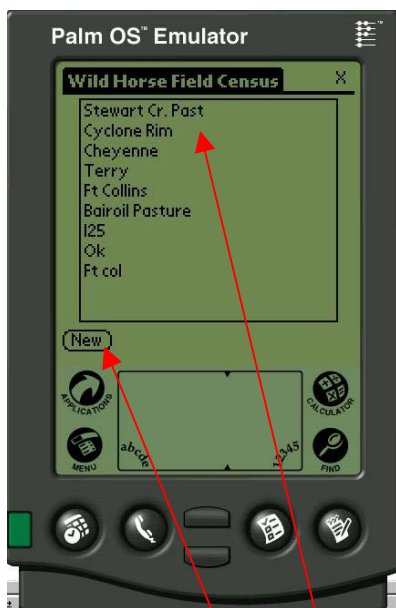

## **WILD HORSE CENSUS**

*Ground and Aerial*

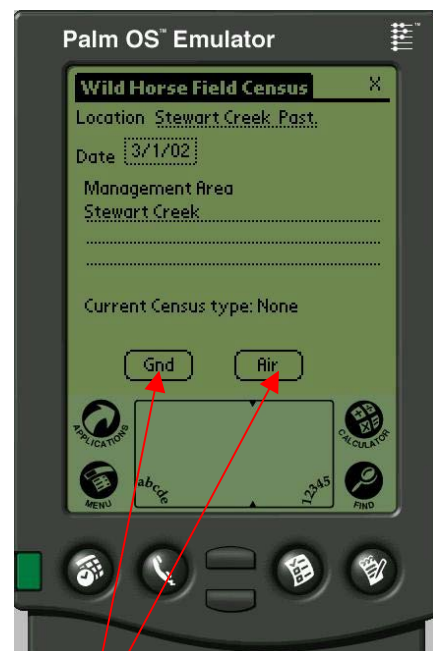

U.S. Department of the Interior  
Bureau of Land Management  
Service Center  
P.O. Box 25047  
Denver, CO 80225-0047

## Instructions for using the Wild Horse Census Program.

Start the wild horse census program by touching this button.

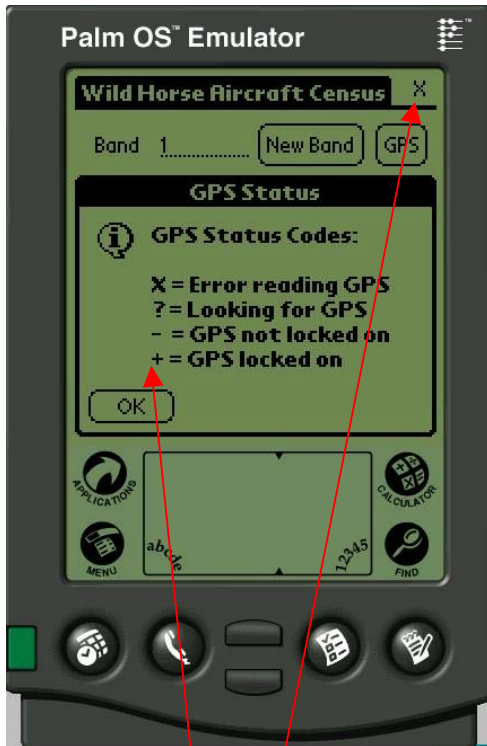

Select a record by touching the record you want, or start a new record by touching new

If you select New you will have a choice of air or ground census. Make your choice and fill out the heading information.

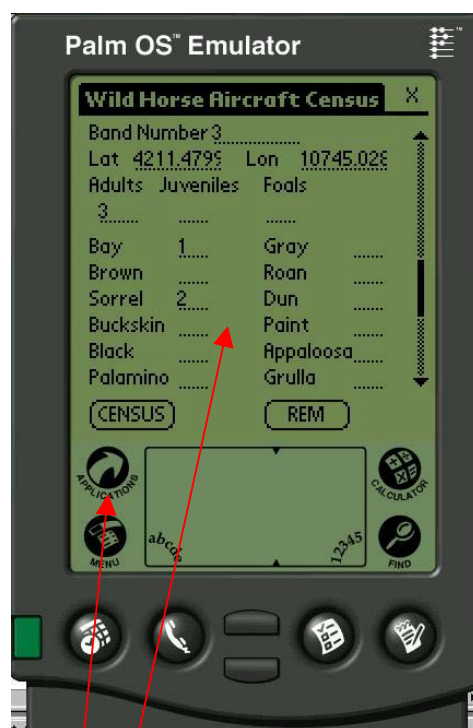

## Instructions for using the Wild Horse Census Program.

If you connect a GPS unit to your PDA it will automatically set coordinates when you push the New Band or GPS buttons. The figure in the upper right hand corner gives you the status of the GPS signal.

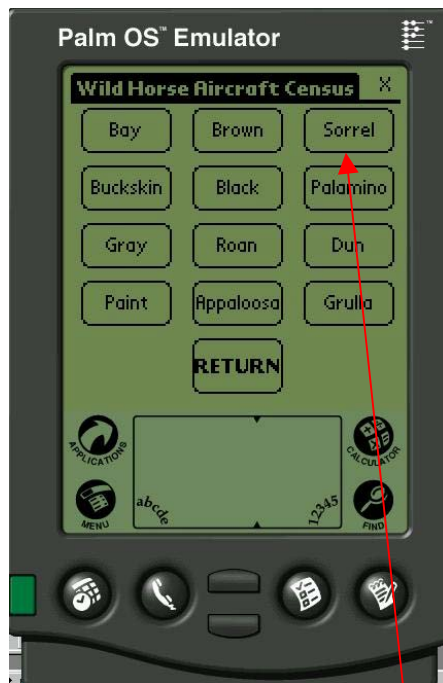

## Instructions for using the Wild Horse Census Program.

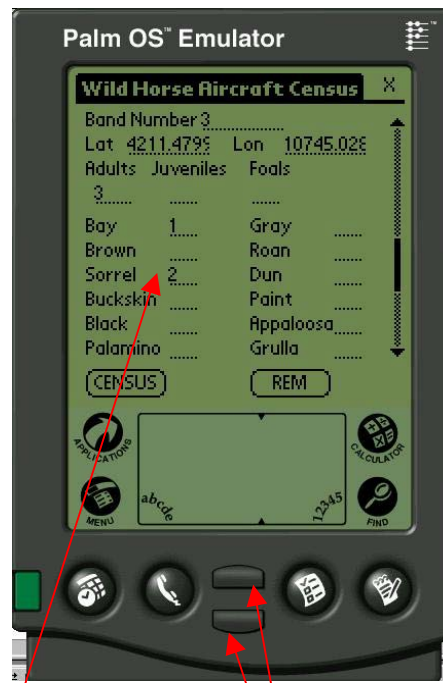

The program is designed to operate in "touch screen" mode. The New Band, GPS, ADULT, JUVENILE, FOAL, etc. can be touched with your thumb, finger, or the stylus. Touching the new band button increments the screen to the next band and sets the GPS coordinates. Touching GPS sets new coordinates without incrementing the band number. Touching the ADULT, JUVENILE, FOAL buttons count the number of the respective animals (ie. If you touch the ADULT button 3 times it enters 3 animals). The undo button subtracts an animal in case of a mistake. You can enter colors if you wish by touching the COLOR button. The SUM button gives you a summary of what was counted in that band. The REM button takes you to a remark screen. In summary mode, the CENSUS button returns you to the census screen. In the census screen, the Head button returns you to the heading screen. To exit the program touch the Applications button.

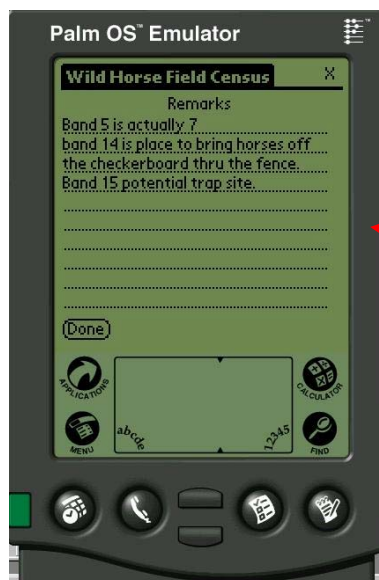

## Instructions for using the Wild Horse Census Program.

Touch these buttons to count the number of horses in the band of that color ie. If there are 2 sorrels touch the sorrel button 2 times. The number of horses whose color is noted does not have to match the total number of horses in the band (you may only want to note how many paint horses there are for example.) The RETURN button returns you to the census screen.

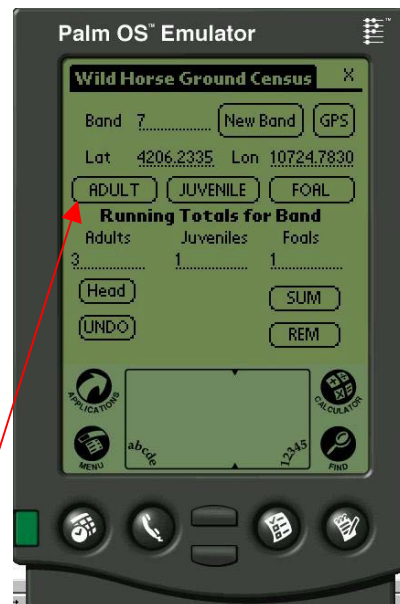

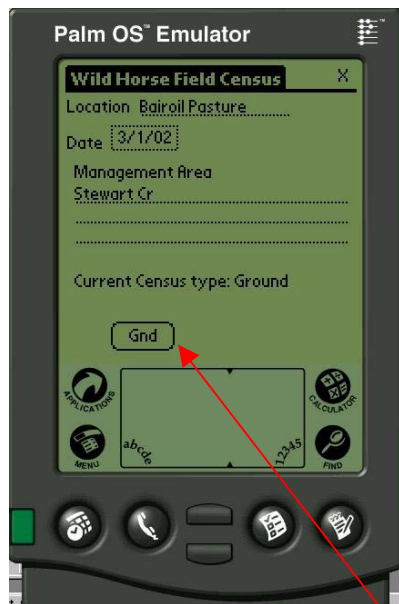

When in the summary screen you may look at the summary screen for each band by using these buttons. The up button moves to the previous band. The down button moves to the next band.

Remarks screen example

## Instructions for using the Wild Horse Census Program.

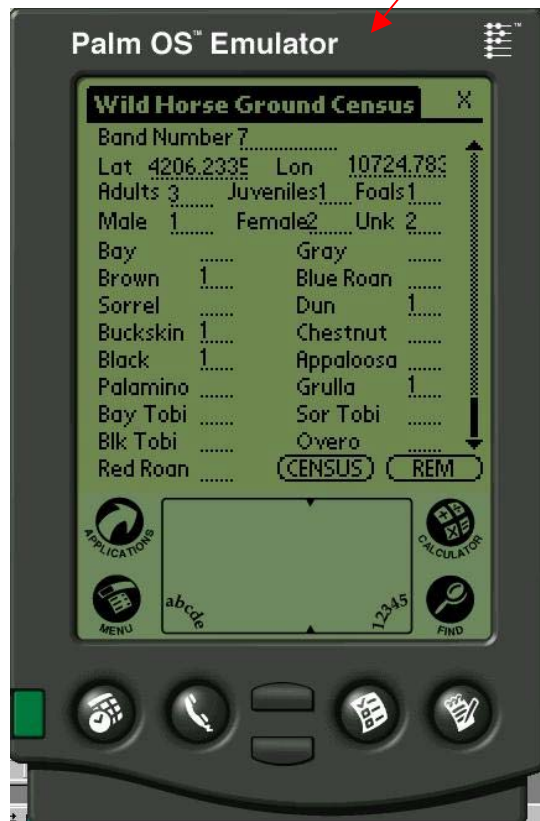

The ground census program automatically takes you to a sex screen then a color screen when you push the ADULT, JUVENILE, or FOAL buttons. Otherwise, it works identical to the aerial census program.

## Instructions for using the Wild Horse Census Program.

The data can be imported from Excel into ArcView and stored by geographic coordinate.

Labels on map show band number and number of horses at that location. Table shows detail including Date, HMA, band no. Lat Lon, Horses by color.

## Instructions for using the Wild Horse Census Program.

GIS allows us to zoom in on details such as a trap location. The table can store all the data by geographic coordinate. This data was collected while driving in a vehicle using the wild horse census program for the palm PDA. It would work identically in an aircraft.
